

ISIS - Feature #1013

All output PDS products require a CHECKSUM value, but ISIS3 does not have the ability to produce a checksum of raw data

| Description | |
| There is a requirement that all PDS products created need to have a CHECKSUM calculated for the raw data bytes that make up the image data. There currently is no way to generate a checksum value in ISIS3. This capability needs to be added in order for us to be able to create valid output PDS labelled products. | |
