

ISIS - Bug #2263

cnetnewradii test is not properly removing path from file name in output

2015-06-09 01:27 PM - Jean Backer

Status: Closed	
Priority: Normal	
Assignee: David Miller	
Category: Applications	
Target version: N/A	
Impact: Bug has no impact on functionality of any Isis applications. Fixing the bug will improve testing of cnetnewradii application	Software Version:

Description

The cnetnewradii appTest called "errors" is using a SED command that assumes that the path of a file name begins with "/usgs". Since test data areas can be set to other locations, this assumption should not be made.

For an example using SED to remove a path, see

http://intranet.astrogeology.wr.usgs.gov/wiki/index.php/ISIS_Application_Testing_SOP

- Status changed from Assigned to In Progress

- Target version set to N/A

- % Done changed from 0 to 50

- Impact updated

Code coverage indicates some types of errors are not tested. A second ticket may be necessary to add these tests.
